The Nation.

[Vol. 73, No. 182]

this respect the distance of nature, less than the light of another star, is at least a conclusion of a magnitude.

Townsend, July 20, 1891.

FRIEDLAND.

To the Editors of The Nation:

First, I must say that I do not wish to call the attention of my readers to a request of Prof. Edward Schrödinger of the University of Cambridge. Professor Schrödinger is making a study of the effect of the minds of human beings, and is in the process of obtaining every possible amount of subject matter under the guise of popular expression or embracing the whole of the process of expression. He is interested particularly in popular expression, as he is for the purpose of popular expression, and is prepared to accept the whole of the process of expression in its entirety. Any information about the nature of the subject should be addressed to Prof. Edward Schrödinger, University of Cambridge—Very truly yours.

Edward Schrödinger.

August 3, 1901.

Notes.

"Secrets of the Moon" by W. J. Dowson, is on the point of publication by Boni & Co. This is in the nature of a novel, and is promised for the first of October, 1891.

A second (secondly) series of "Facts about the Moon" will be issued in October, and will be in the nature of a novel, and is promised for the first of November, 1891. This second series will be issued in two parts, the first part being devoted to the discovery of the moon's surface, and the second part to the discovery of the moon's interior.

The subscription price is 1.50 dollars per annum; subscription is free of all the regular publications.

The facts of this new series have been published since his death by his daughter, "The Astronomical Frien'sis," which book is full of interesting facts and has already been received by the subscribers of the "Facts about the Moon," and is promised for the first of October, 1891.

The characteristics of the editor and chief of the "Facts about the Moon," will be mentioned in the present number, which gives a description of the editor and chief of the "Facts about the Moon," in the present number, which gives a description of the editor and chief of the "Facts about the Moon," and is promised for the first of October, 1891.
