SOPHISTS — SOUL

The tendency to somnambulism, i.e., simple nocturnal walking, talking, etc., is in the absence of normal consciousness, and is a symptom often met with in the life-history of nervous disorders. It is often the result of an incident of rapid growth, or of temporary conditions such as indigestion. The more definite forms of somnambulism are almost invariably associated with abnormal functional conditions of the nervous system.

Literature: Carpentier, Ment. Physical; Poe, Sleep-walking and Hypnotism (1841). - See also God: Our God; Fr. Félix de Bort; It. Filglio di Dio; The name of Jesus Christ which indicates his divine distinction from the human nature and origin, and also his relation to the Father in the Trinitarian conception of the Godhead. See CHRIST.

Sorcery (A.S. sorcery; Fr. sorcier; It. strega). (3)

Sorcery or witchcraft is the practice of an occult power or influence, or the performance of an act with an intent of supernatural change, such as the production of effects not possible by natural means. It is the practice of magic, which is the art of using supernatural powers in order to accomplish some desired end. Sorcery is a form of magic that involves the use of spells, incantations, and other magical practices in order to achieve a specific effect.

Sorcery and witchcraft are often associated with the supernatural and the occult, and are believed to be the work of evil spirits or demons. In many cultures, sorcery is considered to be a sin or a form of witchcraft. It is often used to control and manipulate others, and is considered to be dangerous and harmful.

Sorcery and witchcraft are also often associated with the idea of a supernatural being that can be summoned or contacted for a specific purpose. This being is often referred to as a demon or a spirit, and is believed to have the power to grant wishes or bring about change in the lives of humans.

Sorcery and witchcraft are often used in rituals and ceremonies, and are believed to be able to bring about certain outcomes, such as healing or protection. However, these beliefs are often unscientific and have been disproven by scientific research.
