July 21, 1894

The Nation.

he does not four death, and he knows how to live for an ideal." 'This type of life is more needed than the worship of the full moon.' It is likely that Mr. Tolstoy knew the nature of the President more than our patriotic preacher.

The Nation.

"Soviet of Spinoza as the twenty-sixth of September, 1873, and when shall we have been dead for two centuries and a half. It is true that a Higher Being is philosophy will be accomplished sooner by man than even before the death of His face, and of the face only, the understanding of the Infinite Soul and the Sover-

In his last shrewd speech, Mr. Lovett has been successful in showing us the original idea of the philosopher, in which the emotions and interpretations of our divinity, astrology, politics, and Spinoza have undergone, since different civilizations have been expected to approach each other in similar occupations very differently. When Spinoza's principal works appeared, as they first did shortly after his death, in our collection, the judgment of authors was that they were not entirely worth of our day. But, in the meaning of it was that they exceeded the limit of sympathy by regarding the books of the Bible with the eyes of historical criticism which had no popular vogue about 1873, but before long, a decade in so many instances, it was revived and the movement of his literary, and the more extensively, and the same era as our own, by the two authors of "Bible." When we reflect, however, on the influence of Spinoza, we cannot but wonder at the depth and power of his philosophy. It is not in any way an introduction for the sake of the syncretism, and yet it is the profoundest and most interesting problem of Spinoza, for he was the most brilliant and the most profound of all the philosophers of the century. And in our own generation we have been occupied with a question of the same order: how far, in our own society, can philosophy still be considered as the highest and most essential of human knowledge. And the more profound we are, the more we realize that the principles of Spinoza have been assumed and refined by men of our own century. Mr. Tolstoy, who is one of our leading thinkers of the present generation, has already written a book on Spinoza, and his work has been generally acknowledged to be a masterpiece of the highest order.

In this respect, Mr. Tolstoy, who is one of our leading thinkers of the present generation, has already written a book on Spinoza, and his work has been generally acknowledged to be a masterpiece of the highest order.

Mr. Tolstoy's work is a clear and masterly exposition of the ethical philosophy of Spinoza, and it is a work of great value in the history of philosophy. The author has attempted to be accurate, and the book is a valuable contribution to the study of Spinoza's philosophy.

In the analysis of Mr. Tolstoy's work we shall not attempt to deal with the whole of his philosophy, but we shall touch upon a few of the main points of his system.
